## EDUCATION

BSCS • November 2022

Government College University  
Lahore

## KEY SKILLS

- React.js
- Node.js / NestJS
- TypeScript
- MongoDB
- Redis (Caching)
- RESTful API Design
- PostgreSQL / MySQL
- Python (FastAPI)
- React Native
- Redux (State Mgmt)
- Stripe & Stripe Connect
- Third-Party Integrations
- GitHub / CI-CD
- Statistical Computing
- AI-Assisted Development
- GitHub Copilot
- Cursor AI
- Prompt Engineering
- LLM Tools (Claude/ChatGPT)

## PRACTICES

- Full-Stack Development
- Agile / Scrum
- API Architecture & Design
- Performance Optimization
- Production Support
- Code Review & Debugging
- Technical Mentoring

## PROFILE

Full Stack Developer with almost 4 years of professional experience designing, building, and optimizing scalable web applications. Strong hands-on expertise in React.js, Node.js, TypeScript, MongoDB, and Redis. Proven track record delivering high-performance, production-grade full-stack solutions across enterprise, fintech-adjacent, and analytics domains — with deep ownership across the entire development lifecycle from architecture through testing, deployment, and production support.

## EXPERIENCE

**Full Stack Developer** • Codebricks, Johar Town Lahore

*July 2025 – Present*

- Develop, maintain, and optimize a full-stack data analysis platform using Node.js (NestJS), TypeScript, ReactJS, and Python FastAPI, designing scalable backend architecture consumed by hundreds of internal/external users.
- Architect and own the RESTful API layer for statistical computation and reporting; introduced a Redis caching layer that improved response times and reduced report generation time by ~50%, directly improving application reliability and scalability.
- Implement and integrate third-party services and data-driven APIs across backend and frontend, including real-time dashboard integrations for FlavorWiki and similar platforms.
- Troubleshoot and optimize production application performance, applying systematic debugging and root-cause analysis to resolve reliability issues in live environments.
- Leverage AI-assisted development tools (GitHub Copilot, Cursor AI, Claude, ChatGPT) to accelerate code generation, debugging, and refactoring, increasing feature delivery velocity.
- Build and maintain full-stack features end-to-end across NestJS/TypeScript, ReactJS, and FastAPI, taking full ownership from requirements through testing, deployment, and production support.
- Participate in code reviews, enforce coding standards and security guidelines, and drive clean architecture and reusable component standards across the codebase.
- Mentor and onboard junior developers, providing technical guidance on architecture, TypeScript best practices, and REST API design.

**Full Stack Developer** • I2C

*January 2024 – June 2025*

- Developed and maintained features across multiple enterprise-scale web applications, implementing backend logic via MySQL, REST APIs, and server-side business rules.
- Built responsive, scalable, and high-performance frontend components for production enterprise systems used by large client organizations.
- Collaborated with cross-functional Agile teams (QA, product, design) throughout the full development lifecycle to deliver production-ready solutions on schedule.
- Contributed to API development, third-party service integration, and performance troubleshooting to improve overall system functionality and reliability.

**Junior Full Stack Developer** • GigaLabs, Johar Town Lahore

*November 2022 – January 2024*

- Designed and built a scalable inventory management system from the ground up using NestJS (TypeScript), ReactJS, and PostgreSQL, following REST API and clean architecture best practices.

- Security Best Practices
- Application Scalability
- Clean Architecture

## INTERESTS

---

- Programming & Technology
- AI & Emerging Tech
- Learning New Skills
- Gaming
- Traveling

- Built modular, maintainable backend architecture using dependency injection and TypeScript, establishing reusable patterns later adopted across teams.
- Developed responsive UI components with Redux for centralized state management, reducing bug reports by 40% through disciplined code review and testing practices.
- Optimized PostgreSQL database queries, improving data retrieval performance by 20% for production workloads.
- Participated in code reviews, debugging sessions, and production support activities across the full software development lifecycle.

## PROJECTS

---

### Inventory & Asset Management Platform

- Full-stack application built on NestJS/TypeScript, ReactJS, and PostgreSQL. Owned backend architecture, database schema design, RESTful API layer, and query optimization for fast retrieval at scale.

### Incubation Center — Social Platform for Entrepreneurs, Mentors & Investors

- MERN stack (MongoDB, Express, React, Node.js) platform with real-time data flow, scalable backend services, and Redux state management. Implemented third-party API integrations and scalable backend architecture for high-concurrency usage.

### Payments & Third-Party Integrations

- Implemented Stripe Connect and Express Dashboard for payment processing; built CSV data pipelines, Twilio chat integration, and Navigator API location services — demonstrating breadth in third-party API integration and backend service design.
